SKILL 4 – S3 Bucket Versioning

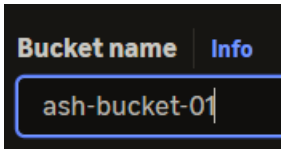

1. Search for S3 in your AWS Management Console

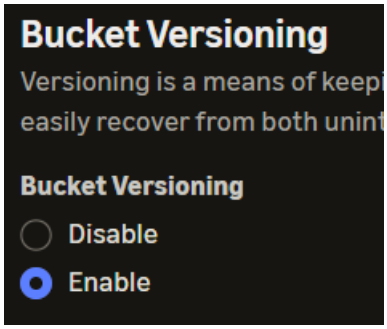

2. Create a bucket

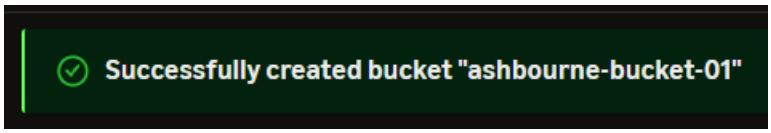

3. Give a unique bucket name

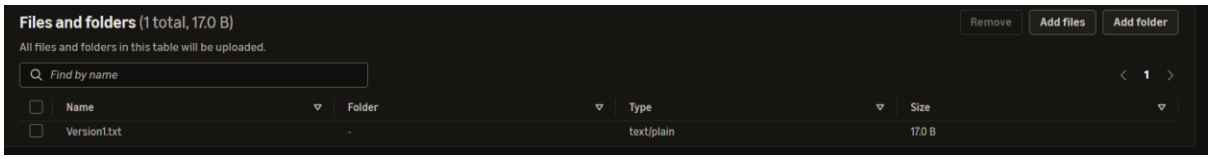

4. Enable the bucket versioning

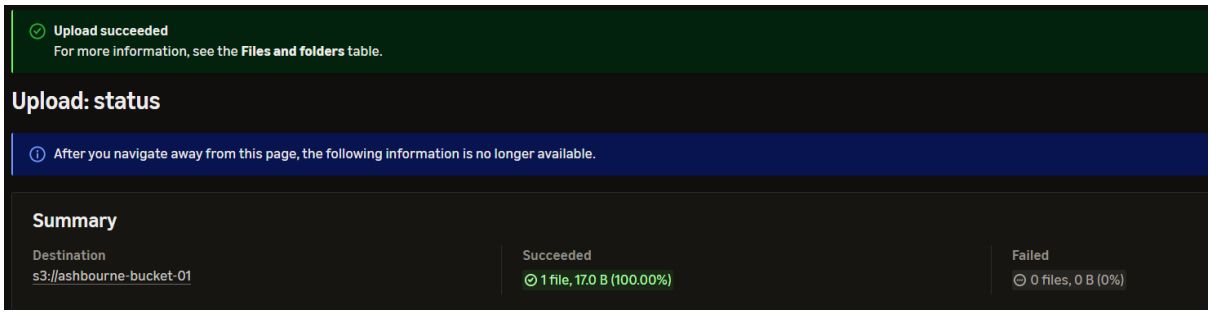

5. Click on create bucket and you'll get a success pop-up

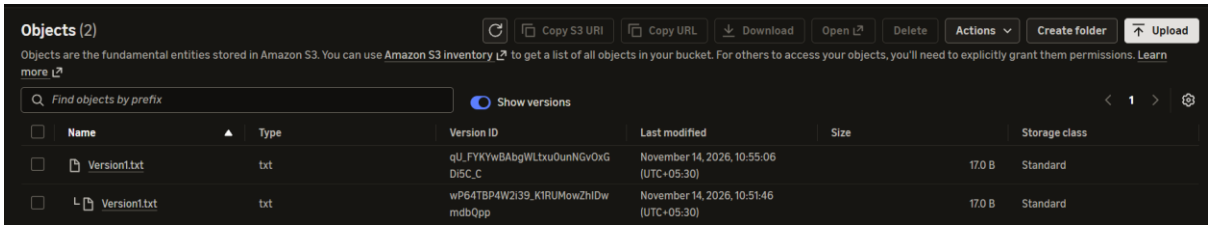

6. Create a small .txt file with "This is version 1" as the content and upload

7. You'll get a successful upload pop-up

8. Edit the .txt file to "This is version 2" and upload again

We'll be able to see the versions of the same file, with one file that has 'L' beside it that stands for Last version.
